Projects

Car Rental Platform with AI Chatbot Integration

Built a full-stack vehicle booking platform using the MERN stack with dynamic car listings and real-time data flow. - Integrated an AI Chatbot for 24/7 customer assistance, improving user engagement and automating rental queries. - Optimized performance, responsiveness, and state management, deploying the live application on Vercel.

Employee Management System (EMS) with AI Assistance

Developed a full-stack administrative portal to streamline workforce management and secure employee records. - Built robust RESTful APIs with Node.js and Express.js for full CRUD functionalities. - Integrated an AI Chatbot assistant within the dashboard to quickly answer administrative queries and pull user data.

E-Commerce Store with AI Customer Support Chatbot

Designed a scalable modern retail frontend using React.js and Tailwind CSS with advanced filtering and cart features. - Added an interactive AI customer service chatbot to recommend products and assist users during checkout.
